Trusted by 60+ organizations worldwide

Data leaders recommend Zeenea

Zeenea and Stellantis have a very solid relationship. On the one hand, they provide the data catalog we needed, offering a pure experience for our end users: they log in to the platform and everything is cleaned, organized, and simple. On the other hand, Zeenea's teams are doing a fantastic job putting up with us, to meet our numerous requirements and challenges by always opening their hearts, sharing, and discussing with us.

Ricardo RODRIGUES
Head of Data Governance
STELLANTIS

With Zeenea, we were able to centralize our analytics & BI data into a single solution. The data catalog design via the Zeenea Studio app enabled data transparency and clarity in the documentation of our data assets, while the Zeenea Explorer app enabled our end users to find the right data for their respective use cases via its data discovery features, which represented a big advantage for Lufthansa Cargo.

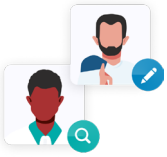
Why a Data Discovery Platform?

The explosion of enterprise data

Organizations are generating ever increasing amounts of data due to the explosion of digital activities and services. Therefore, they must turn to the right tools to ensure this information is correctly managed and controlled. Indeed, with great data comes great responsibility.

For enterprises to truly profit off of their data, they must equip with a solution that enables data-driven people to easily find, discover, manage, and above all, trust in their information assets: **a Data Catalog**.

Ever-increasing volumes of data assets



The multiplication of data producers & consumers

Lack of Data Literacy & Knowledge

© 2024 Zeenea - All rights reserved

The paradigm shift in data management

Centralized and monolithic data management, anchored in a data lake or warehouse, creates a massive bottleneck that stifles innovation and hinders data teams from meeting the rapidly evolving demands of the business. In response, the industry is progressively embracing decentralized data management, especially through the data mesh.

85% of organizations recognize the relevance of Data Mesh
(BARC 2023)

54% of organizations are planning to implement or are implementing Data Mesh
(BARC 2023)

70% of organizations have or are in the process of implementing Data Products
(Eckerson Group 2024)

For enterprises to support this paradigm shift in data management, they must be equipped with a solution that allows domains to share their most valuable data assets and products with other domains: **an Enterprise Data Marketplace**.

Zeenea's modern data discovery solutions

Data Catalog

Zeenea Data Discovery Platform democratizes data with a cataloging solution that centralizes and unifies all enterprise metadata into a single source of truth.

LEARN MORE

Discover data in seconds

Data stewards can automatically index and update data from all sources, and data consumers can quickly find the information they need by typing simple keywords in the Google-esque search bar.

Automate data documentation

Data stewards can add, configure, and overlay documentation properties on data through a flexible metamodel template that is powered by our knowledge graph.

Increase data trust

Data consumers can view data quality metrics right from the discovery phase, facilitated by our powerful integration with data quality management solutions.

Create a common data language

Data stewards can manage a common business vocabulary that is made available across the entire organization via our Business Glossary features.

Track & trace data transformations

Data consumers get a complete view of data's lifecycle – from its collection to use, storage, and preservation over time – via a user-friendly lineage graph.

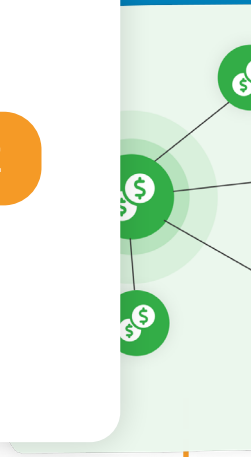
Zeenea's modern data discovery solutions

Enterprise Data Marketplace

Zeenea Data Discovery Platform lets you enhance your Data Catalog with an Enterprise Data Marketplace (EDM) to publish, share, and consume the most valuable enterprise data products.

LEARN MORE



Share the most valuable data products

Domains can publish, maintain, monitor, and share their most valuable enterprise data assets straight onto the EDM through our federated data cataloging capabilities.

Shop for data seamlessly

Data consumers can browse and shop for Data Products and other valuable catalog objects shared by the various domains in the EDM, just like an e-commerce experience.

Manage Data Products

Data producers can publish, maintain, monitor, and share their Data Products directly onto the EDM via our Data Product Management capabilities.

Personalize the data marketplace

Organizations can personalize their EDM by incorporating branding elements such as logos, custom colors, and themes to reflect their identity and enhance user engagement.

Our advanced platform capabilities

Business Glossary

Build and share a common data vocabulary across your entire organization.

Data Compliance

Manage personal data assets and ensure that policies and regulations are well communicated.

Search & Explore

Find and understand the relevant data for your business use cases.

Data Governance

Drive successful business initiatives with active and agile data governance.

Data Lineage

Provide your data teams with a complete view of their data's lifecycle.

Data Quality

Connect to your DQM solution to display datasets' quality metrics right from the discovery phase.

Data Shopping

Search, browse, and shop for your most valuable enterprise data assets: Data Products, AI models, dashboards, and more.

Data Stewardship

Reduce the time spent on documentation tasks, break data silos, and increase data knowledge.

Metadata Management

Activate your metadata to power your data & analytics use cases.

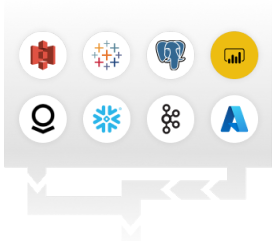
Easy to set up, use, and scale

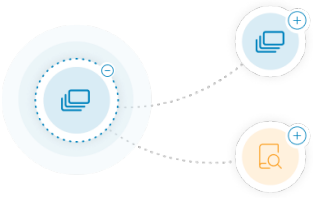
Free yourself from unnecessary constraints

Our platform is a cloud native solution available anywhere in the world in just a few clicks. By choosing Zeenea, control the costs related to implementing and maintaining a data platform while simplifying its access to your teams.



Integrate our solution into your data ecosystem

Our universal connectivity and API-first approach adapts to all systems and all data strategies (edge, cloud, multi-cloud, cross-cloud, hybrid) to build an enterprise-wide information repository.



Get a 360° view of your data landscape

Our platform is powered by knowledge graph technologies, providing rich and in-depth search results, optimized data discovery, and intelligent recommendations.

Work with a safe & secure platform

Keeping our customers' data safe and secure has always been a top priority at Zeenea, this is why we are SOC 2 Type II and ISO 27001 compliant.
